Presents: A new Eco-Friendly way to suppress Lithium-Ion Fires. Developed by Firefighters for Firefighters, and to make our community safer 100% bio made; plant based.

1. Super fast cooling, by its superior endothermic properties, it cools thermal runaway within 30seconds.
 2. Isolation by providing a barrier between cells.
 3. Insulation by providing massive heat absorption and not allowing heat to transfer to the next cell.
- Our solution blocks dangerous off gassing and encapsulates dangerous PFAS chemicals found in some lithium-ion batteries and their electrolytes
 - Thermal stop is very easy to clean up due the the small amount needed to knock down a big fire.
